

Non-Profits adds additional benefits and saves money

Case study.

Client

Local non-profit located in Southern California.

Scenario

A non-profit based in Orange California was looking to increase their benefits to offer their employees on budget. The non-profit was not able to afford traditional insurance benefits for their employees. They wanted to have something in place to give to their employees if they ever got sick. They also wanted to offer their employees nontraditional benefits that could help their well-being and their families. Understanding that Mental Health is a key contributor to many daily needs, it was important to also find a solution.

Solution

emmyHealth provided much needed care through Teladoc for General Medicine for them and their families with a \$0 cost copay. With \$25,000 Life Insurance it gave peace of mind to the employees if anything happened to them for their families. Another big benefit to both the non-profits and the employees is a tax savings. The employees got more on their paycheck as well as the employer saving money on payroll taxes of almost \$100,00 for the first year.

AT A GALANCE

Increasing the benefits for the employees with no out-of-pocket costs.

Employees adding more money in their pocket.

Employer saving money on their payroll taxes.
